

# *1Research portal - find what you are looking for*

Information that researchers and post-graduate students need to access can be located in many disparate places at a university: At the Library, Research Office, Technology Transfer Office, Information Technology Department or service providers external to the university.

The **1Research** portal is configured in such a way that researchers can access any research enabling services via a simple search and click action and aims to offer the following:

- A tool for the institutional Research Office to assist in centralising the institution's research image and brand
- A research ecosystem that brings together research service consumers and research service providers in a coherent and controlled way
- A single access point to research services – internal or external

To higher education and research institutions, **1Research** is a cloud-based hub that allows up to twice as many people to find what they are looking for in under ten seconds due to mobile friendly and smart search capabilities.

## **Find It Faster**

- Smart search allows people to quickly find what they want
- Configuration at the individual level creates a unique experience for each user and user segment

## **Sustainable Solution**

- Any new software can easily be integrated into the hub as well as easily accessed by organisational members
- Connect stakeholders on-site

## **Low overhead**

- Content can be managed by a junior resource at the institution

*Education done smartly*
